

AI CONSULTING

Know what to improve before you pay to build it.

AI Consulting • A paid decision and design engagement. Use your roadmap with Elevate AI, your own team or an existing provider. Implementation is a separate decision.

01	Who it is for	A decision-maker with a recurring operational problem, a named process owner and access to the people and systems needed to investigate it. A one-off task or an untested idea may need a simpler next step.
02	What you buy	An agreed investigation of the current workflow, an options comparison and a prioritised, costed roadmap. The proposal defines the depth of process mapping, opportunity analysis, indicative costs, dependencies, approval points and success measures. We consider process change, existing software and no build alongside custom work.
03	How we work together	Agree scope → investigate the work → compare options → prioritise → present the roadmap. You provide a decision sponsor, process owners, appropriate evidence and timely answers. Access is arranged for the agreed purpose; production access is not assumed.
04	What is agreed before payment	The proposal states the fee, scope, timetable, participants, outputs, review rounds, responsibilities and rights. You own the commissioned roadmap under the agreed terms; existing Elevate tools and third-party intellectual property remain distinct.
05	What is not included by default	Production implementation, a complete build specification beyond the agreed depth, unlimited revisions, ongoing operations and guaranteed savings. A build or support engagement needs its own agreed scope and fees.
06	A free conversation is not a free design exercise	The free 30-minute call establishes fit and what a proposal should cover. Bespoke workflow analysis, solution design and the costed roadmap belong to paid consulting.
